

Konstantin Staschus

Secretary-General ENTSO-E

Title- Regional Market Integration

Without waiting for the Energy Union to emphasize the need for regional operation centres ENTSO-E has launched the TSO coordination, with the so-called Regional Security Coordination Initiatives, or RSCIs. ENTSO-E strongly supports the idea of regional cooperation as an interim step towards the Internal Energy Market, enhanced security of supply. The RSCI implementation is a strong answer to the Energy Union/ACER challenge of regional operational centers. According to the policy paper establishing regional coordination (RSCIs) for existing synchronous areas would deliver a solution that ensures fast and stable security coordination over time. All TSOs are required to join an RSCI, according to ENTSO-E.
